RH = restored hybrid

TC = Top cross

3H = 3-way hybrid

Hybrids are sown in trials at 70 seeds/sqm, conventional varieties at 120 seeds/sqm

P1, P2 first and second year of recommendation

\* Variety no longer in trials

C = yield control

# Fortis was called Fortress

\$ Mendel is recommended for growing on clubroot infected land.

On the 1-9 scales high figures indicate that a variety shows the character to a high degree

There have been reports of some varietal associations showing poor pollination and seed set. It is important to follow the seed company agronomy advice and to check the seed mixture when sowing.

Average LSD 5%. Varieties that are more than one LSD apart are significantly different at the 5% confidence level.

~ The regional yields include supplementary trials (1998 to 2001) which may not have received the full fungicide protocol. Comparisons of variety performance across regions are not valid.
